

Michael Vasilkovsky

Date of Birth	7 th July 1997	Mobile Phone	+7 (925) 943 9468
City	Moscow	E-mail	waytobehigh@gmail.com
		Github	waytobehigh

Education

2015 - 2019	Moscow Institute of Physics and Technology (MIPT) Major: Applied Mathematics and Physics Minor: Radio Engineering and Cybernetics
2017 - 2019	Yandex School of Data Analysis (YSDA) Direction: Big Data
2019 - Present	Skolkovo Institute of Science and Technology (Skoltech) Major: Applied Mathematics and Computer Science Minor: Data Science

Relevant Courses

MIPT	Calculus, Linear Algebra, Probability Theory, Discrete Mathematics, Computational Mathematics, Parallel Algorithms, Random Processes
YSDA	Advanced Probability, Algorithms and Data Structures, Applied Statistics in Machine Learning, Machine Learning, Advanced Python, Advanced C++, Parallel and Distributed Computations, Natural Language Processing, Big Data, Advanced Deep Learning, Reinforcement Learning, ML Engineering

Work Experience

May 2018 - Feb 2019	Laboratory of Neural Systems and Deep Learning at MIPT (known as iPavlov) <i>Research Data Scientist</i> Studied text classification methods in case of imbalanced classes (hierarchical classification, data augmentation in NLP). Prototyped and maintained AutoFAQ – automated question answering B2B service.
Apr 2019 - Jul 2019	NeuroCore <i>Data Scientist</i> Reached a solid baseline in a project on high-precision detection of potentially dangerous items on X-ray of luggage. Having started without any data our team solved detection task with precision 0.95 and almost full recall. First time tried myself as a team leader.
Aug 2019 - Present	DBrain <i>Data Scientist</i> Structured document recognition. Implemented confidence estimation of the final prediction of the whole recognition pipeline in order to improve accuracy by additional human verification (Human in the Loop).

Activities

- **Modulbank AI Hack**

Awardee, April 2018, Moscow

Building a recommendation system of bank's services based on common information about client

- **Photo Lab Hack**

Winner, June 2018, Moscow

Online event-based visual content generation (connected with Football Championship)

- **Junction (Finland)**

Awardee, November 2018, Helsinki

Event-based hint generation for support workers integrable with SAP Customer Service

The biggest hackathon in Europe

- **Mail.ru Hack**

Awardee, December 2018, Moscow

Toxic reviews classification

Skills

- **Programming languages**

Python, C++, C

- **Workflow and SWE**

Linux, Git, Docker, CI

- **Machine Learning**

Data processing	<i>NumPy, Pandas, pyspark</i>
NN frameworks	<i>PyTorch, Keras, beginner in Tensorflow, catalyst</i>
Visualisation	<i>matplotlib, seaborn</i>
ML libs	<i>sklearn, boosting algorithms (xgboost, CatBoost etc.)</i>

- **Parallel and distributed computations**

C/C++ family	<i>C++ threads, CUDA, OpenMP, OpenACC, MPI</i>
Python family	<i>Python threading, Pyro4</i>

- **Web**

Flask, bare basics of HTML, CSS and Bootstrap

- **Languages**

Russian, English
